

PowerBI

Sample work

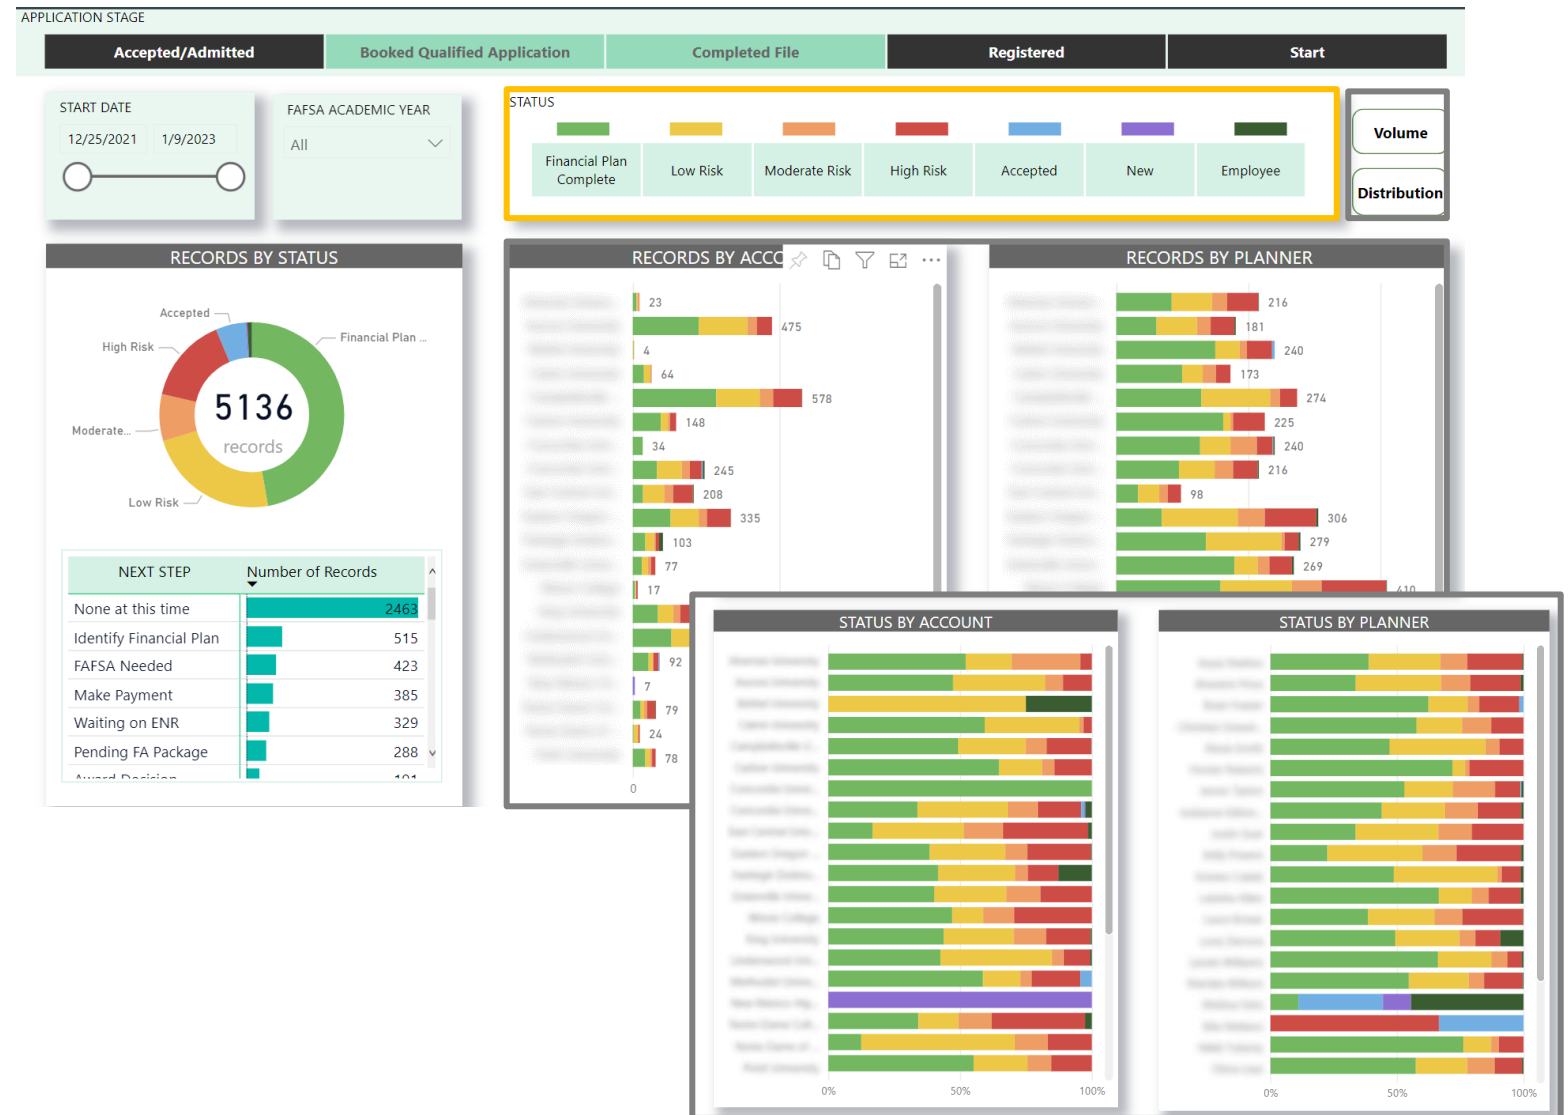

THUY NGUYEN

Sample I:

A page in an interactive operational dashboard for a team to **track the status of their work**.

Features:

- Creatively created a *STATUS* slicer combined with color legend (not a built-in feature in PowerBI).
- Created buttons that allow users to visualize the same data different ways.
- Data backed up by a SQL materialized view in Snowflake.

Sample 2:

A page in an interactive operational dashboard for call center teams to track their **call statistics**.

Features:

- Built in several slicers for easy filtering (new users may have a hard time using PowerBI Filter pane).
- Added sparkline to show trend over time and min/max values.
- Data backed up by a SQL materialized view in Snowflake.

Sample 2:

A page in an interactive operational dashboard for call center teams to track their **agent status**.

Features:

- Built in several slicers for easy filtering (new users may have a hard time using PowerBI Filter pane).
- Data backed up by a SQL materialized view in Snowflake.
